

1. Introduction:

To fetch the delay statistics for the packets transmitted from local server to central server and back using TCP protocol.

2. Scope: Applicable for the Twinkle Door Access System

3. The folder where the program resides and how to execute them from the start:

In Central Server (Raspberry Pi, IP addr:10.32.26.70)

Location: /home/pi/Desktop/Delay_Statistics/TCP/TCP_Delay_Stats_Integrate_DB /

Name of the file: TCP_Delay_Stats_Data_Store_DB_v2.py

How to execute the program in Central Server:

- Open the terminal.
- Change the directory by typing:
“cd /home/pi/Desktop/Delay_Statistics/TCP/TCP_Delay_Stats_Integrate_DB/”
- To run the program type:
“python3 TCP_Delay_Stats_Data_Store_DB_v2.py”

In Local Server (Raspberry Pi, IP addr: 10.32.26.20):

Location:

/home/pi/Desktop/Delay_Statistics/TCP/TCP_Delay_Stats_Integrate_DB/Multiuser

Name of the file: TCP_Delay_Stats_Data_Store_DB_v3.py

Dependent file: TCP_Delay_Stats_Data_Connct_Cent_Serv.py

How to execute the program in Local Server:

- Open the terminal.
- Change the directory by typing:
“cd /home/pi/Desktop/Delay_Statistics/TCP/TCP_Delay_Stats_Integrate_DB/Multiuser”
- To run the local server program type:
“python3 TCP_Delay_Stats_Data_Store_DB_v3.py”
- To run the program for synthetic testing:
“python3 TCP_client_test.py”

Note: This file is solely for testing purpose. It generates the Twinklet packets and sends it to Local Server

4. Guide to fetch the delay statistics file in Central Server: The program is a self-written script.

In Central Server (Raspberry Pi, IP addr:10.32.26.70)

Location:/home/pi/Desktop/Delay_Statistics/TCP/TCP_Delay_Stats_Integrate_DB/Delay_Statistics

How to execute the program in Central Server:

- Open the terminal.
- Change the directory by typing:

“cd /home/pi/Desktop/Delay_Statistics/TCP/TCP_Delay_Stats_Integrate_DB/Delay_Statistics”

- To run the script file:
“./get_db.sh”

Note: This is a script to fetch the database file storing the delay statistics in Local Server

- On fetching the database file, execute:
“python3 Excel_sheet.py”

This file will log the delay parameters and statistics in an Excel sheet.

5. Details about any scripts or 3rd party programs:

No third-party program is implemented here

6. Platforms required for running the programs (PC/RPi ...):

Raspberry Pi, Windows with Visual Studio, PyCharm, Linux Systems.
